

Jerguson's Tri-Magnet Level Switches deliver failure-free performance.

The innovative use of repelling magnetic fields eliminates springs and other mechanical elements that are prone to failure due to high temperatures, extreme vibration, or fatigue over time.

FEATURES

- Tri-Magnet Switching for Unparalleled Reliability
- Vibration Resistant
- 316 Stainless Steel Trim
- ASME B31.1 & B31.3 Design

"The new switches are very rugged and dependable, and most importantly, they are mercury-free and safe for the environment. Dealing with spilled mercury is an extremely difficult task, but it is one we don't have to worry about with these new switches. The Jerguson Tri-Magnet Level Switches have been in operation in our facility since May 2007."

The Tri-Magnet Level Switch was endurance tested to over 850,000 cycles without failure.

JERGUSON® LEVEL SWITCHES THE SWITCH MECHANISM

Principle of Operation

The switch mechanism is based on a unique three-dimensional magnet design where the snap action is accomplished by the utilization of magnetic repulsion and attraction. The primary magnet mounted on the float rod causes the secondary magnet to rotate as it passes up and down. The tertiary switch magnet is repelled by the secondary and snaps to the opposite side. This causes the cradle to pivot, moving the push rods, which operate the switch contacts. The result is positive snap action, interlock switching...**no springs...no spring problems!**

Type	Choice of Switch Mechanisms	Application
X4, X8	General purpose - 10 amp mechanisms for general purpose duties up to 480°F	
D4, D8	High temperature - 5 amp mechanisms for high temperature applications up to 750°F	
H4, H8	Hermetically sealed - 5 amp mechanisms suitable for temperatures up to 480°F, contaminated atmosphere environments and intrinsically safe circuits. All moving parts and contacts enclosed in an inert gas filled stainless steel enclosure.	
P4, P8	Low current - 0.25 amp gold-plated contact switch mechanism for use in intrinsically safe or low power circuits up to 750°F	
E4, E8	Encapsulated - 5 amp switch mechanism is sealed / encapsulated inside aluminum housing, suitable for temperatures to 850°F

THE FLOAT CHAMBER

Applications

The flanged chamber construction of this series of horizontal controls makes them a very serviceable level control solution for petrochemical, power generation and OEM applications.

The unique three-magnet system provides reliable switching for applications such as level alarm, safety shutdown and pump control in product storage tanks, gas scrubbers, process vessels, and high pressure steam generators.

Single switch only available. Chambers are designed to ASME B31.1, Power Piping Code, and ASME B31.3, Chemical Plant and Petroleum Refinery Piping Code.

Options:

- Stainless Steel Chamber
- Low temperature chamber below -20°F
- High temperature chrome-moly chamber
- Certified to B31.1 or B31.3
- Non-destructive testing: radiographic, ultrasonic, magnetic particle, dye penetrant
- Epoxy paint finish (FP-18)
- Extended NEMA 4 switch enclosure housing 1 SPDT switch mechanisms or 1 DPDT switch mechanisms
- Vent connection
- Specific gravity down to 0.50
- NACE specification MR-0175
